TWITTER TAGGED SEARCH APPLICATION

The intended purpose of this document is to provide instructions on how to use the Twitter Tag Search application. You can save any Twitter hashtag with a tag of your choosing. This makes it easier to remember your Twitter searches. Clicking on the tag button will bring up the Twitter search in your Android's web browser.

USING THE APPLICATION

The following figure is a detailed example of the Twitter Tag Search layout.

HOW TO SAVE TWITTER TAG SEARCHES:

1) Enter the Twitter hashtag to query here.

2) Enter your personal tag on this line. This is intended for your organization.

3) Click the save button to save the query and tag combination.

   IMPORTANT! BOTH THE HASHTAG TO QUERY AND THE TAG MUST BE ENTERED BEFORE THE SEARCH CAN BE SAVED.

4) Click the tag button to view the hashtag search on Twitter.

5) Click Edit to change either the Twitter hashtag query or your personal tag.

6) Click Delete to remove the Twitter tagged search. You will be prompted to confirm the deletion!

7) Click the Clear All Tags button to remove all saved search tags. You will be prompted to confirm this action. Once cleared, the tags cannot be recovered!

That's it! You can save as many tags as you like as they will scroll on the screen. Due to limitations of this application, excessive tags may cause performance issues. Happy Twitter searching!
